

BOB MARTIN

Senior Full Stack Developer

+1 (218) 800-7646 @ bob.martin.95115@gmail.com https://www.linkedin.com/in/ramartin

SUMMARY

Staff-level Full Stack Engineer with 10 years of experience building scalable distributed systems across fintech, logistics, telecom, and supply chain domains. Strong full-stack expertise in modern JavaScript ecosystem (MERN/MEVN), delivering end-to-end applications, backend systems, and cloud-native platforms with a focus on scalability, performance, and reliability. Recently focused on Generative AI and RAG-based systems (vector search, LLM integrations) for enterprise solutions.

EXPERIENCE

11/2025 - 03/2026

Remote

Senior Full Stack Developer

Client: Walmart

- Designed and developed scalable backend services using Node.js, Express.js, and NestJS for microservices-based applications.
- Built full stack web applications using React, Next.js, TypeScript, MongoDB, and PostgreSQL with high scalability and performance.
- Integrated GenAI/LLM APIs and AI-powered recommendation systems to improve personalization and predictive analytics.
- Integrated LLM-based workflows into product features, including prompt orchestration, response structuring, and output formatting for downstream rendering systems
- Implemented CI/CD pipelines and cloud deployments using AWS, Docker, Kubernetes, and GitHub Actions in Agile development environments.

04/2023 - 10/2025

Remote

Senior Full Stack Developer

Client: Wells Fargo

- Developed scalable RESTful microservices using Node.js, Express.js, and TypeScript for enterprise banking platforms.
- Built cloud-native applications using Docker, Kubernetes, AWS, and serverless architectures for high availability and performance.
- Designed responsive frontend applications with React, Next.js, GraphQL, and Redux for real-time financial dashboards.
- Implemented CI/CD pipelines, secure authentication systems, and optimized PostgreSQL databases within Agile development environments.

09/2022 - 03/2023

Remote

Senior Full Stack Developer

Client: Change Health Care

- Developed scalable healthcare microservices and RESTful APIs using Node.js, Express.js, PostgreSQL, and Sequelize in Agile development environments.
- Implemented secure authentication systems using OAuth 2.0 and JWT while building cloud-based backend services on AWS and Dockerized infrastructure.
- Built responsive healthcare dashboards using React.js, TypeScript, Redux, and Material UI with reusable and scalable frontend architecture.
- Integrated distributed systems, message queues, logging pipelines, and CI/CD workflows using RabbitMQ, Jenkins, Docker, and GitHub Actions.

07/2020 - 08/2022

Remote

Full Stack Developer

Client: Hewlett Packard enterprise

- Developed and maintained scalable React.js and React Native (TypeScript) applications, building reusable components, state management (Redux), routing, and responsive healthcare dashboards.
- Designed frontend architecture using one-way data flow, Virtual DOM, and modular component patterns, improving performance, scalability, and maintainability of large-scale applications.
- Built and maintained RESTful APIs using Node.js and Express.js for healthcare workflows including patient records, scheduling systems, and clinical data exchange.
- Integrated healthcare interoperability standards (FHIR and HL7) to enable secure and standardized data exchange between EHR systems and external hospital platforms.

03/2019 - 06/2020

Remote

Full Stack Developer

Client: TJX

- Developed responsive, component-based web applications using React.js, TypeScript, HTML5, CSS3, and modern JavaScript (ES6+), focusing on reusable UI architecture and SPA design.
- Built and maintained RESTful APIs using Node.js and Express.js, handling business logic, request validation, and data transformation for enterprise applications.
- Modernized legacy enterprise systems by refactoring VBScript-style logic into Node.js services and JavaScript modules, improving maintainability and scalability.
- Designed and developed microservices and API gateway components to support distributed system architecture and multi-client access
- Integrated OAuth authentication systems to secure messaging web applications and enforce identity-based access control

EXPERIENCE

05/2018 - 02/2019

Nashville

Software Developer

Wellpath

- Developed and enhanced large-scale healthcare web applications using React.js, Node.js, and Express.js, supporting clinicians, administrators, and operational teams across critical workflows.
- Designed and implemented scalable RESTful API architectures for healthcare systems including patient management, scheduling, teleconsultation, and clinical data processing.
- Built reusable frontend components using React.js and Redux, improving UI consistency, maintainability, and development efficiency across dashboard modules.
- Implemented secure authentication and authorization using JWT and RBAC, enabling role-based access for physicians, patients, and administrative users.
- Optimized PostgreSQL databases and backend performance through indexing, schema design, and query tuning, improving API response times by ~30-40%.

06/2017 - 04/2018

Buffalo, NY

Junior Software Developer

Fiserve

- Developed and maintained lending and loan servicing applications for automotive finance systems, ensuring accurate processing and tracking of financial data across enterprise workflows.
- Participated in the full SDLC using Agile methodologies, contributing to development, testing, deployment, and production support activities.
- Led integration of Zendesk Support with an internal Survey Builder system in a cross-functional team of developers and QA engineers, improving customer support workflow automation.
- Designed and built user-facing applications based on business and technical requirements, ensuring alignment with financial domain needs and system scalability.
- Worked extensively with SQL Server, stored procedures, and relational database design, supporting legacy system maintenance, debugging, and performance improvements.

SKILLS

React Next.js TypeScript JavaScript Redux Tailwind CSS HTML5 CSS3 Responsive UI Design PHP

Backend Development

Node.js Express.js Ruby on Rails FastAPI RESTful APIs Microservices Architecture API Design Authentication

AI/LLM Systems

LLM integration Prompt Engineering AI Content Generation Pipelines FastAPI-based AI Services Workflow Orchestration

Databases

PostgreSQL MySQL CouchDB Database Schema Design Query Optimization Indexing Data Modeling

Cloud & DevOps

AWS Docker CI/CD Concepts Environments Configuration Scalable Infrastructure

Tools & Practices

Git GitHub Agile Development Code Review System Design Clean Architecture SOLID Principles Debugging

EDUCATION

09/2014 - 05/2018

Michigan City, United States

Bachelor's Degree in Computer Science
Michigan State University
